

“Optimizing the power of your network!”

Mark Casey, President CFN Services, Presenting at the Datacenter Dynamics Conference

United States of America (Press Release) April 16, 2009 -- Herndon, VA April 16, 2009. Mark Casey, President of CFN Services, is a featured speaker at the Datacenter Dynamics Conference, April 21st. The event is taking place in Washington, DC at the Renaissance Hotel.

The session Mark will participate in is entitled, “How Will the Information Superhighway and Data Center Fabric be Reshaped by New Demands of Content and Data?”

Abstract of Session: Once ranked 4th in the world by the OECD, the U.S. has fallen to 15th among developed countries in broadband penetration. Initiatives for green infrastructure and smart energy grids are one thing, but they all must be connected – the backbone of the digital recovery is fiber. Over \$6.5 billion in funds for broadband expansion will be spent, but that will depend on a new definition of network neutrality from the Federal Communications Commission

- How will grants be channeled to local governments, ISPs and consumers?
- Will neutral network management requirements discourage ISPs from applying for broadband expansion grants?
- Determining the impact of virtualization, cloud computing, and data and content warehousing requirements on advanced automation, analytics and fast reporting
- Maximizing energy efficient performance at the lowest possible price

About CFN Services: CFN Services is a managed telecom infrastructure services company providing network services for the Enterprise, Public Sector and Carrier Markets. Specializing in network planning, deployment, and managed services, including local access transport, low latency networking, and mobile backhaul optimization, CFN Services leverages the company's flagship FiberSource® network planning and optimization platform. CFN Services has provided network planning and deployment services to some of the leading wireless and wireline network operators including Verizon, AT&T, Level 3 and Sprint.

About Datacenter Dynamics: Datacenter Dynamics is a full service B2B information provider at the core of which is a unique series of events tailored specifically to deliver enhanced knowledge and networking opportunities to professionals that design, build and operate data centres. Datacenter Dynamics is acknowledged as the definitive event where the leading experts in the field share their insights with the top level datacentre operators in each market.
